NOTICE TO UNITHOLDERS

**AMENDMENTS TO UNDERLYING INDEX METHODOLOGY OF SPDR® FTSE®
GREATER CHINA ETF (“Greater China ETF”)**

11 March 2013

Dear Unitholders

We are writing to inform you that effective from 18 March 2013, the index methodology of the FTSE® Greater China HKD Index, the underlying index of the Greater China ETF (the “**Underlying Index**”) has been amended. In particular, amendments have been made to the free float methodology adopted by FTSE from a banded structure to using actual free float.

Eligible securities for inclusion in the Underlying Index is subject to 3 screening criteria, namely size, liquidity and free float.

Before 18 March 2013 – Use of banded structure

Prior to 18 March 2013, a banded structure is used to calculate the free float. The bands used are as follows:

Actual free float (%)	Adjusted free float within FTSE Indices (%)
5 – 15	Actual free float weight
15 – 20	20
20 – 30	30
30 – 40	40
40 – 50	50
50 – 75	75
Over 75	100

Following the application of an initial free float restriction, a constituent's free float will only be changed if its actual free float moves to more than 5% above the minimum or 5% below the maximum of an adjacent band. This 5% threshold does not apply if the change is greater than one band.

From 18 March 2013 – Use of actual free float

At initial implementation, the free float will move to actual float (rounded up to the nearest 1%) unless the actual float is within a 3% buffer of the constituent's current banded float.

Subsequent changes to free float will be made following corporate events, and also at quarterly reviews if the rounded free float has moved to more than 3% above or below the existing rounded free float.
