
Thematic Next-Generation Trends

Q4 2023 ETF Dashboard

Monthly Review

Flows

- December saw inflows of \$307 million, the first positive monthly flow since July 2023.
- Enterprise Collaboration had the most inflows at \$346 million, 7% relative to its asset base.
- 2023 closed with outflows of \$2.9 billion, after 2022 saw negative flows of \$4.6 billion.
- Only 2 sectors out of the 13 that we track saw positive flows in 2023, including Robotics & AI with inflows of \$2 billion, or 50% relative to its asset base at the beginning of the year.

Performance

- The average return on NextGen Trends ETFs in December was 9.4%, outperforming the S&P 500® Index by 4.9%.
- FinTech gained the most (26.7%), followed by Advanced Healthcare (10.0%).
- Overall, 85% of all NextGen Trends ETFs outperformed the S&P 500 last month.
- In 2023, the average NextGen Trends fund has outperformed the S&P 500 by 0.8%, with 36% of all funds outperforming.

Source: State Street Global Advisors, Bloomberg Finance, L.P., Morningstar, as of December 31, 2023. **Past performance is not a reliable indicator of future performance.** Index returns are unmanaged and do not reflect the deduction of any fees or expenses. Index returns reflect all items of income, gain and loss and the reinvestment of dividends and other income as applicable.

Fund Spotlight

SPDR® S&P Kensho Future Security ETF (FITE)

As hybrid warfare that combines conventional military operations, cyberattacks and disinformation campaigns has become the new reality in the world's geopolitical landscape, increasing geopolitical tensions may keep the cybersecurity theme in investors' focus given the ongoing conflicts in the Middle East and the Russia-Ukraine war, as well as critical presidential elections in Taiwan and the US.

As cybersecurity remains a growing concern, regulators have introduced new regulations to increase oversight and transparency of cybersecurity incidents.¹ With greater transparency, companies are incentivized to allocate more budget to cybersecurity risk management to protect their reputation.

Meanwhile, generative AI can be seen as a double-edged sword for cybersecurity, not only helping to carry out more sophisticated attacks but also potentially improving the industry's capability to detect and act on threats. Its rapid emergence may also increase demand for cyber defence

while improving the efficiency of cybersecurity service providers.

Against this backdrop, global enterprise spending on security and risk management is estimated to have grown 11% annually over the past six years and is projected to increase another 14% this year.² The US government is also expected to increase cybersecurity funding at a similar pace, allocating \$13.5 billion for the Pentagon to advance its adoption of zero trust architecture and \$12.7 billion for civilian cybersecurity-related activities.³

Investors looking to potentially capture geopolitical, technological and regulatory tailwinds in the cybersecurity industry might consider the SPDR® S&P Kensho Future Security ETF (FITE). It designed to capture companies whose products and services are driving innovation behind future security, including cybersecurity and advanced technology for military application.

¹ SEC.gov, July 2023. ² Gartner, September 28, 2023. ³ White House, Analytical Perspectives: FY 2024 Federal Budget, March 2023.

The above targets are estimates based on certain assumptions and analysis made by a Third Party. There is no guarantee that the estimates will be achieved.

Flows

- December saw inflows of \$307 million, the first positive monthly flow since July 2023.
- Enterprise Collaboration had the most inflows at \$346 million, 7% relative to its asset base.
- 2023 closed with \$2.9 billion in outflows, after 2022 saw negative flows of \$4.6 billion.

Source: ssga.com. **Performance quoted represents past performance, which is not a reliable indicator of future performance. Investment return and principal value will fluctuate, so you may have a gain or loss when shares are sold. Current performance may be higher or lower than that quoted. All results are historical and assume the reinvestment of dividends and capital gains. Visit ssga.com for most recent month-end performance. Performance returns for periods of less than one year are not annualized. Performance is shown net of fees. The gross expense ratio is the fund's total annual operating expenses ratio. It is gross of any fee waivers or expense reimbursements. It can be found in the fund's most recent prospectus.**

The market price used to calculate the market value return is the midpoint between the highest bid and the lowest offer on the exchange on which the shares of the fund are listed for trading, as of the time that the Fund's NAV is calculated. If you trade your shares at another time, your returns may differ. *As of 03/24/2021, Gross Expense Ratio was reduced for SPYX and EFAX to 0.20%, ^ As of 04/22/2022, Gross Expense Ratio was reduced for NZAC to 0.12%. † Prior to 4/22/2022, the ticker for NZAC was LOWC, the SPDR® MSCI ACWI Climate Paris Aligned ETF was known as the SPDR® MSCI ACWI Low Carbon Target ETF.

Glossary

Beta Volatility measure of the percentage price change of the security given a one percent change in a representative market index. The beta value is generated by a risk model and determined by comparing the price movements of the security and the representative market index. A beta below 1 can indicate an investment with lower volatility than the market.

Brent Crude Spot Price (Used in Macro Sensitivity) Current spot price in current pipeline export quality Brent blend as supplied at Sullom Voe.

Correlation measures the historical tendency of two investments to move together. Investors often combine investments with low correlations to diversify portfolios.

Earnings Per Share Earnings per share (EPS) is the monetary value of earnings per outstanding share of common stock for a company.

EPS Growth Rate The Compounded Annual Growth Rate (CAGR) of the operating Earnings per Share (EPS) over the specified time period.

Estimated 3–5 EPS Growth (%) The estimated 3–5 year EPS growth is based on the underlying holdings of the index. The earnings estimates for the underlying holdings are provided by FactSet and are used to calculate a compounded annual growth rate for earnings per share over the next 3–5 years. These analysts estimates are forecasts of the firms' potential ability to increase earnings per share over a full market cycle, and not a measure of expected stock or index price performance. The 3–5 year EPS estimate for an index is a market cap weighted average of the underlying firms' figures.

EV to Sales Enterprise value-to-sales is a financial valuation measure that compares the enterprise value (EV) of a company to its annual sales.

EV Enterprise value is a measure of a company's total value, often used as a more comprehensive alternative to equity market capitalization. EV includes in its calculation the market capitalization of a company but also short-term and long-term debt as well as any cash on the company's balance sheet.

LT Debt to Equity Ratio is a financial ratio indication the relative proportion of long-term debt and shareholders' equity. A high LT debt to equity ratio generally means that a company has been aggressive in financing its business with debt.

Macro Sensitivity to Economic Variables This is measured as the beta of returns relative to a particular variable. Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to a particular variable.

Next Gen Trends Thematic sectors are derived from SPDR Research fundamental beliefs of new industries emerging as a result of innovation and grouped into 13 thematic categories based on their fund objective.

Advanced Health Care - Genomics, biotechnology, alternative medicines, wearable equipment, immunotherapy, and innovative health care solutions.

Broad Innovation - covers all or multiple sectors.

Enhanced Connectivity - Semiconductors, 5G networks, and advanced computing power.

Enterprise Collaboration - Big data, cloud communication platforms or CPaaS platforms, SaaS platforms, integrated video and messaging technologies.

FinTech - Blockchain, mobile payments, peer-to-peer lending, crypto-economy, and automated wealth services.

Future Security - Cyber security, network and internet security, smart drones for border protection, intelligent security devices.

Future Tech & Communications - Innovative technology firms, social media, social gaming, and digital communities.

New Consumer - online retail and the Gig economy.

Robotics & AI - Advanced manufacturing, robotics used for commercial and consumer applications, and artificial intelligence technologies.

Smart Cities - Smart grids, smart factories, smart buildings, intelligent machines, and smart transportation infrastructure.

Smart Transportation - Autonomous and electric vehicles as well as technology supporting it, ride sharing, and next generation transport and transit systems.

Space Exploration - Space systems and technologies.

Sustainable Environment - Water, solar, wind, battery technology, low carbon targeting, and sustainable energy technology.

Organic growth It is the increase of assets coming from net flows, rather than market appreciation.

Percentage of Foreign Firm Assets This figure represents the weighted average of the amount of the underlying foreign firm assets as a percent of total geographic segment firm assets.

Percentage of Foreign Firm Sales This figure represents the weighted average of the amount of the underlying foreign firm sales as a percent of total geographic segment firm sales.

Price to Earnings Ratio (P/E) The ratio of the price of a stock and the firms earnings per share. A low P/E translates into a value stock. A high P/E is more indicative of a growth stock.

Return on Equity (ROE) This measures the rate of return on the ownership interest (shareholders' equity) of the common stock owners. It measures a firm's efficiency at generating profits from every unit of shareholders' equity. ROE shows how well a company uses investment funds to generate earnings growth.

US 10 Year Yield (Used in Macro Sensitivity) The rate is comprised of Generic United States on-the-run government 10 Year Treasuries. The yield quoted is yield to maturity and on a pre-tax basis.

US Dollar Spot Index (Used in Macro Sensitivity) The Dollar Spot Index tracks the performance of a basket of ten leading global currencies versus the US Dollar. Each currency in the basket and their weight is determined annually based on their share of international trade and FX liquidity.

Important Disclosures

Important Risk Information

The information provided does not constitute investment advice and it should not be relied on as such. It should not be considered a solicitation to buy or an offer to sell a security. It does not take into account any investor's particular investment objectives, strategies, tax status or investment horizon. You should consult your tax and financial advisor.

Investing involves risk including the risk of loss of principal.

The whole or any part of this work may not be reproduced, copied or transmitted or any of its contents disclosed to third parties without SSGA's express written consent.

All information is from SSGA unless otherwise noted and has been obtained from sources believed to be reliable, but its accuracy is not guaranteed. There is no representation or warranty as to the current accuracy, reliability or completeness of, nor liability for, decisions based on such information and it should not be relied on as such.

Concentrated investments in a particular sector or industry tend to be more volatile than the overall market and increases risk that events negatively affecting such sectors or industries could reduce returns, potentially causing the value of the Fund's shares to decrease.

Foreign securities may be subject to higher volatility than US securities, due to varying degrees of regulation and limited liquidity. These risks are magnified in emerging markets.

No fossil fuel reserve ownership may have an adverse effect on a company's profitability and, in turn, the returns of the fund.

The returns on a portfolio of securities which exclude companies that do not meet the portfolio's specified ESG criteria may trail the returns on a portfolio of securities which include such companies. A portfolio's ESG criteria may result in the portfolio investing in industry sectors or securities which underperform the market as a whole.

The companies included in the Index are engaged in emerging industries and new technologies that may be unproven. Such industries and technologies may be adversely affected by technological advances, competition, rapid product or service obsolescence, and new and evolving regulations. Companies included in the Index may rely on a combination of patents, copyrights, trademarks and trade secret laws to establish and protect their proprietary rights in their products and technologies, and may be adversely affected by loss or impairment of those rights. In addition, companies in the Index may have limited product lines, markets, financial resources or personnel. The Index may include stocks of smaller, less-seasoned companies that may be more volatile.

Technology companies, including cyber security companies, can be significantly affected by obsolescence of existing technology, limited product lines, competition for financial resources, qualified personnel, new market entrants or impairment of patent and intellectual property rights that can adversely affect profit margins.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns.

Equity securities may fluctuate in value in response to the activities of individual companies and general market and economic conditions.

Passively managed funds invest by sampling the index, holding a range of securities that, in the aggregate, approximates the full Index in terms of key risk factors and other characteristics. This may cause the fund to experience tracking errors relative to performance of the index.
