# A Case For: Sustainable Climate Equity Funds

---

State Street Global Advisors has developed a range of state-of-the-art equity climate funds. Our climate-aware investment process enables investors to immediately improve their portfolio's carbon profile and reduce climate risk, while maintaining target returns.

---

## Environmental, Social & Governance (ESG)

---

### The Slow-Burning Crisis

The scientific evidence for man-made climate change is incontrovertible. The last five years have been the hottest on record and there is a greater than even chance that 2020 will be the hottest.<sup>1</sup>

Last year was marked by disaster caused by more frequent and extreme weather events brought about by climate change. A notable example was the Australian wildfires, set off by a record heatwave, which destroyed 44,400 square miles of bushland and forest and led to the killing or displacement of an estimated 3 billion animals.<sup>2</sup>

Warming has also led to unprecedented melting of ice and snow at the north and south poles. Sea level rise will mean coastal communities are much more exposed to flooding and extreme storms, leading many to migrate inland, putting pressure on infrastructure and resources. And with greater carbon dioxide in the oceans comes ocean acidification, degradation of marine ecosystems and reduction in marine biodiversity.

Research suggests that 'tipping points' such as the melting of huge ice sheets or the loss of the Amazon rainforest are much more likely to occur than previously thought.<sup>3</sup>

## Tackling the Climate Threat

In recognition of the severity of climate risks, countries have committed to reducing carbon emissions in line with the 2015 Paris Agreement of limiting global warming to 2° Celsius or less over the 21st century. The European Union, UK and several other countries have committed to be carbon neutral by 2050. In advance of regulation, many companies are proactively taking steps to reduce their carbon footprints and disclose their exposure to climate risks. Below are three trends in the global response to climate change that investors will have to address.

- 1 The Seismic Energy Transition** Recent years have seen a sustained shift in energy use away from fossil fuels and towards renewable energy, driven largely by acknowledgement of the impact of fossil fuel pollution and the need to reduce carbon emissions. The falling costs of solar and wind energy have further increased their attractiveness compared to fossil fuels. The COVID-19 crisis has acted to hasten the decline in fossil fuel demand and by the time the global economy recovers, it is possible that most of the growth in energy demand may be met by renewable energy sources.<sup>4</sup> The transition to the low carbon economy will require companies in all sectors to decrease their carbon footprint.
- 2 Regulatory Tipping Point** An increasing number of countries and local jurisdictions are implementing carbon pricing and emissions trading initiatives in order to reach net zero carbon emissions by 2050. The European Parliament approved the EU Taxonomy Regulation, which will be fundamental to the realisation of the European Green Deal, which aims to boost private sector investment in green and sustainable projects. The European Insurance and Occupational Pensions Authority has stated that pension funds and insurers can play a key role in the transition towards a low carbon economy and that they should actively incorporate climate change risks in their own risk management frameworks. The European Commission is also seeking to integrate sustainability risks and sustainability factors into Undertakings for the Collective Investment in Transferable Securities (UCITS) schemes, the Alternative Investment Fund Managers Directive (AIFMD) and the Markets in Financial Instruments Directive (MiFID).
- 3. Capital Allocations** A growing number of investors are incorporating climate considerations into capital allocation decisions. A recent study found that two-thirds of the world's largest pension schemes expect to increase their allocations to climate-related index funds over the next three years.<sup>5</sup> Another potential driver for the increased adoption of climate considerations in investment portfolios is the perceived robustness of sustainable investment strategies.

## Portfolio Impact

Investors are increasingly appreciating that climate risks are financial risks. Climate change is the highest priority among UN PRI signatories, representing over 3,000 investors and over \$100 trillion of assets.<sup>6</sup> For investors, climate change and its impact on asset valuations are becoming important criteria for investment decisions. The risks from climate change can be split into four broad categories:

Figure 1 **Climate Change Risks**

<b>Systemic Risk</b> to financial markets as they seek to digest impact on economic growth, societal disruption and energy-mix change	<b>Country Risk</b> to petro-states that fail to reinvent themselves in time
<b>Corporate Risk</b> in sectors across the world, from drilling to diesel engines and from transport to banks	<b>Asset Value at Risk</b> as investors digest vast amounts of potentially stranded fossil fuel assets  Fossil fuel and related sectors comprise about a quarter of all equity and debt markets

Companies face a multitude of climate-related risks, from supply chain disruptions and shortage of raw materials, to falling demand for products and services, to regulations, including carbon taxes.

Appreciating that climate risks must be addressed, what should an optimal climate-aware approach look like? Limiting carbon emissions is clearly necessary but insufficient on its own.

Asset owners must also build long-term resiliency into their portfolios. Resiliency is critical in a world that will be shaped by climate change for decades, perhaps even centuries, to come.

## A 'Mitigation and Adaptation' Approach

We believe in an investment approach that incorporates both **mitigation** of greenhouse gas emissions, and **adaptation** to the future impacts of climate change. These are complementary approaches to reducing climate risks and correspond with asset owners' need to balance short and long-term risks and opportunities.

- Mitigation aims to reduce the flow of heat-trapping greenhouse gases into the atmosphere and increase exposure to new energy and green companies.
- Adaptation aims to increase exposure to companies working proactively to minimise their exposure to the actual or expected physical, economic and regulatory impacts of climate change and the transition to a low-carbon economy.

## Introducing the Sustainable Climate Equity Funds

Imagine if you could drastically improve your portfolio's carbon profile and reduce climate risk, all while keeping risk and return characteristics broadly in place.

This is the rationale behind the State Street Sustainable Climate Equity Funds (the Funds). The Funds adopt a systematic mitigation and adaptation approach that targets Paris-aligned reductions in carbon emissions and reallocation of capital towards companies benefiting from low-carbon technologies.

The Funds aim to achieve the following objectives in relation to five climate categories utilised in the portfolio construction process:

Figure 2 **Paris-Aligned Objectives of the Sustainable Climate Equity Funds**

	Objectives	Metrics
1	<b>Minimise</b> Carbon Emission Intensity	CO <sub>2</sub> emissions per \$m revenues
2	<b>Minimise</b> Fossil Fuel Reserves	Total reserves of CO <sub>2</sub> emissions (metric tonnes)
3	<b>Minimise</b> Brown Revenues	% revenues from extractive activities
4	<b>Maximise</b> Green Revenues	% revenues from extractives activities
5	<b>Build</b> Resilient Portfolio	Score on Climate Change Preparedness

Our approach follows a four-step process:

- 1 Start with the Right Universe** Clients can select three core exposures — World Equity, Europe Equity and US Equity. For each exposure, we first incorporate a set of screens that are aligned with our climate and ESG objectives.

We utilise three sets of exclusions based on product involvement and prescriptive regulatory screens, which we update on a quarterly basis:

Figure 3 **Exclusionary Screening Criteria**

<b>Climate Related Exclusions</b>	<b>Thermal Coal</b>
	<b>Arctic Oil &amp; Gas</b>
	<b>Oil Sands</b>
<b>ESG and Reputation Risk Related</b>	<b>UN Global Compact Violators</b> Provide universal principles on human rights, labour, environment and anti-corruption
	<b>Controversial Weapons/Armaments</b> Screen companies involved in production and distribution of weapons that have disproportionate and indiscriminate impact on civilians
	<b>Severe ESG Controversies</b>
<b>Based on Prescriptive Regulatory Screen</b>	<b>Swedish Ethical Council</b> Focused on influencing companies to operate in a more sustainable way by acting to bring about positive change in companies associated with violations of international conventions on environment and human rights

We follow a well-defined methodology that leverages best-in-class data from multiple data providers. Our approach is attentive to the impact on tracking error of excluded securities.

**2 Source the Best Data** All investment strategies rely on relevant and high-quality data and climate strategies are no different. At State Street Global Advisors, we employ an open architecture to source the best-available data.

We have selected the following data providers for the Funds:

- **Trucost** for carbon emission intensity, fossil fuel reserves and brown revenues
- **FTSE Russell** for green revenues
- **ISS ESG** for adaptation score

**3 Design for Optimal Outcomes** We utilise a mitigation and adaptation framework to rebalance the portfolio towards companies that will achieve our stated objectives:

Figure 4 **Designed for Maximum Impact**

	<b>Reduce Exposure</b> to companies with worse-than-average carbon emissions and fossil fuel assets.
	<b>Increase Exposure</b> to companies generating revenues from low-carbon opportunities.
	<b>Increase Resiliency</b> by targeting companies that are positioned to benefit from the transition to the low-carbon economy.

**4 Balance for Risk-Adjusted Return** We then balance the portfolio to target the highest expected risk-adjusted return, given the desired constraints.

The Fund's optimisation parameters are calibrated by our Global Equity Beta Solutions research team. We model the portfolio based on the following specifications:

Figure 5 **Portfolio Construction Specifications**

**Objective:** Minimise Portfolio Carbon Intensity, Quarterly Balance

Constraints	World	US	Europe
<b>Tracking Error</b>	<=1%	<=1%	<=1%
<b>Liquidity</b>	20% of 60-day MDV buy or sell max	20% of 60-day MDV buy or sell max	20% of 60-day MDV buy or sell max
<b>Holdings</b>	Less than or equal 10x benchmark weight	Less than or equal 10x benchmark weight	Less than or equal 10x benchmark weight
<b>Holdings</b>	+/-2%	+/-2%	+/-2%
<b>Grandfathered Holdings</b>	+/-2.5%	+/-2.5%	+/-2.5%
<b>Sector/Country/Currency</b>	+/-1%	+/-1%	+/-2%
<b>Turnover</b>	Soft constraint of 10% two-way quarterly turnover	Soft constraint of 10% two-way quarterly turnover	Soft constraint of 10% two-way quarterly turnover
<b>Brown Revenues Score</b>	<b>-90%</b>	<b>-90%</b>	<b>-75%</b>
<b>Fossil Fuel Reserves Score</b>	<b>-90%</b>	<b>-90%</b>	<b>-75%</b>
<b>Green Revenues Score</b>	<b>+300%</b>	<b>+300%</b>	<b>+200%</b>
<b>Adaptation Score</b>	<b>+0.25 exposure improvement</b>	<b>+0.25 exposure improvement</b>	<b>+0.25 exposure improvement</b>

As an example, on average for the World Equity Fund, we are able to achieve a carbon intensity reduction of 70% by targeting a brown revenue and fossil fuel reserves reduction of 90%, a green revenue improvement of 300% and an improvement in adaptation score of 20%, compared to the corresponding MSCI World Equity Index.

---

## Key Features of the Sustainable Climate Equity Funds

- Flexibly balances the five objectives of reduced fossil fuel exposure, reduced brown revenue exposure, increased green revenue exposure, as well as increasing exposure to adapting companies, all while minimising carbon intensity.
- Represents sustainable climate parameters while reducing the impact of stock-specific returns.
- Minimises active exposures that do not provide out-performance expectations, such as currency, country, sectors and industries.

---

## Key Benefits of the Sustainable Climate Equity Funds

- Cost-efficient access to diversified Global, US and European equity exposures in a Paris-aligned format
- Significantly improve investors' carbon profile in advance of incoming regulations
- Screen companies that do not meet basic environmental and human rights standards
- Benefit from a state-of-the art portfolio optimisation model

---

## Who We Are

State Street Global Advisors' ESG experience covers portfolio management, investment research, proxy voting and engagement, as well as valuable relationships with third-party research providers.

While most clients' custom ESG criteria require a separate account, State Street Global Advisors has created pooled funds that address many of the more common client approaches. Pooled vehicles may offer advantages such as economies of scale, lower fees and lower administrative costs.

We apply a multi-dimensional approach to our ESG investing solutions. Over more than 30 years of ESG investing, we have advanced our portfolio management and stewardship capabilities to deliver value to our clients.

Through our extensive ESG data and research, we can help develop and implement solutions for our clients that align policy, principles and values, yet seek maximum performance or minimum tracking error within the constraints.

## About State Street Global Advisors

For four decades, State Street Global Advisors has served the world's governments, institutions and financial advisors. With a rigorous, risk-aware approach built on research, analysis and market-tested experience, we build from a breadth of active and index strategies to create cost-effective solutions. As stewards, we help portfolio companies see that what is fair for people and sustainable for the planet can deliver long-term performance. And, as pioneers in index, ETF, and ESG investing, we are always inventing new ways to invest. As a result, we have become the world's third-largest asset manager with US \$3.05 trillion\* under our care.

---

\* This figure is presented as of June 30, 2020 and includes approximately \$69.52 billion of assets with respect to SPDR products for which State Street Global Advisors Funds Distributors, LLC (SSGA FD) acts solely as the marketing agent. SSGA FD and State Street Global Advisors are affiliated.
