- The Index represents approximately 90% of the investable US equity market

About This Benchmark

The S&P Composite 1500[®] Index is designed to measure the performance of the large-, mid-, and small-capitalization segments of the U.S. equity market. The Index consists of those stocks included in the S&P 500[®] Index, the S&P MidCap 400[®] Index[™], and the S&P SmallCap 600[®] IndexSM. Each underlying index includes U.S. common equities listed on the NYSE, NYSE Arca, NYSE American, NASDAQ Global Select Market, NASDAQ Select Market, NASDAQ Capital Market, Investors Exchange (IEX), Cboe BZX, Cboe BYX, Cboe EDGA, or Cboe EDGX that meet specific market capitalization requirements. To be included in an underlying index, a security (or issuer of a security, as applicable) should (i) have an annual dollar value traded to float-adjusted market capitalization ratio of 1 or greater; (ii) trade a minimum of 250,000 shares in each of the six months leading up to the evaluation date; (iii) have a public float of at least 10%; and (iv) have positive aggregate earnings over the four most recent quarters and for the most recent quarter. The Index is float-adjusted market capitalization weighted. Index constituents are added and removed on an as-needed basis.

Glossary

NAV The market value of a mutual fund's or ETFs total assets, minus liabilities, divided by the number of shares outstanding.

Market Value Determined by the midpoint between the bid/offer prices as of the closing time of the New York Stock Exchange (typically 4:00PM EST) on business days.

Gross Expense Ratio The fund's total annual operating expense ratio. It is gross of any fee waivers or expense reimbursements. It can be found in the fund's most recent prospectus.

30 Day SEC Yield (Also known as Standardized Yield) An annualized yield that is calculated by dividing the net investment income earned by the fund over the most recent 30-day period by the current maximum offering price.

Est. 3-5 Year EPS Growth Based on the underlying holdings of the fund. The actual earnings estimates for the underlying holdings

are provided by FactSet, First Call, I/B/E/S Consensus, and Reuters and are used to calculate a mean 3-5 year EPS growth rate estimate.

Index Dividend Yield The weighted average of the underlyings' indicated annual dividend divided by price, expressed as a percentage.

Price/Earnings Ratio FY1 The weighted harmonic average of current share price divided by the forecasted one year earnings per share for each security in the fund. Negative and positive outliers are included in the calculation.

Price/Book Ratio The weighted harmonic average of closing market price divided by the most recent reported book value for each security in the fund's portfolio as calculated for the last twelve months.

Important Risk Information

Equity securities may fluctuate in value in response to the activities of individual companies and general market and economic conditions.

Non-diversified fund may invest in a relatively small number of issuers, a decline in the market value may affect its value more than if it invested in a larger number of issuers. While the Fund is expected to operate as a diversified fund, it may become non-diversified for periods of time solely as a result of changes

in the composition of its benchmark index. The Fund may not purchase securities of any issuer if, as a result, more than 5% of the Fund's total assets would be invested in that issuer's securities; except as may be necessary to approximate the composition of its target index. This limitation does not apply to obligations of the U.S. government or its agencies or instrumentalities.

Passively managed funds hold a range of securities that, in the aggregate, approximates the full Index in terms of key risk factors and other characteristics. This may cause the fund to experience tracking errors relative to performance of the index.

While the shares of ETFs are tradable on secondary markets, they may not readily trade in all market conditions and may trade at significant discounts in periods of market stress.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns.
