

SPDR[®] Bloomberg 1-10 Year TIPS ETF

Key Features

- The SPDR[®] Bloomberg 1-10 Year TIPS ETF seeks to provide investment results that, before fees and expenses, correspond generally to the price and yield performance of the Bloomberg 1-10 Year U.S. Government Inflation-Linked Bond Index (the "Index")
- Seeks to provide exposure to TIPS with remaining maturities between 1 and 10 years
- Seeks to hedge against the erosion of purchasing power due to inflation
- Rebalanced on the last business day of the month

About This Benchmark

The Bloomberg 1-10 Year U.S. Government Inflation-Linked Bond Index is designed to measure the performance of the inflation protected public obligations of the U.S. Treasury commonly known as "TIPS" that have a remaining maturity greater than or equal to 1 year and less than 10 years. TIPS are securities issued by the U.S. Treasury that are designed to provide inflation protection to investors. The Bloomberg 1-10 Year Government Inflation-linked Bond Index includes publicly issued TIPS that have at least 1 year and less than 10 years remaining to maturity on index rebalancing date, with an issue size equal to or in excess of \$500 million. Bonds must be capital-indexed and linked to a domestic inflation index. The securities must be issued by the US Government and must be denominated in U.S. dollars and pay coupon and principal in U.S. dollars. New bonds/reopening's entering the index must settle on or before the index rebalancing date.

Past performance is not a reliable indicator of future performance. Investment return and principal value will fluctuate, so you may have a gain or loss when shares are sold. Current performance may be higher or lower than that quoted. All results are historical and assume the reinvestment of dividends and capital gains. Visit ssga.com for most recent month-end performance. Performance is shown net of fees. Performance of an index is not illustrative of any particular investment. It is not possible to invest directly in an index. Index returns are unmanaged and do not reflect the deduction of any fees or expenses. Index returns reflect all items of income, gain and loss and the reinvestment of dividends and other income as applicable.

Prior to 10/31/2021, the SPDR Bloomberg 1-10 Year TIPS ETF was known as the SPDR Bloomberg Barclays 1-10 Year TIPS ETF.

Prior to 8/24/2021, the Bloomberg 1-10 Year U.S. Government Inflation-Linked Bond Index was known as the Bloomberg Barclays 1-10 Year U.S. Government Inflation-Linked Bond Index.

Glossary

NAV The market value of a mutual fund's or ETFs total assets, minus liabilities, divided by the number of shares outstanding.

Market Value Determined by the midpoint between the bid/offer prices as of the closing time of the New York Stock Exchange (typically 4:00PM EST) on business days.

Gross Expense Ratio The fund's total annual operating expense ratio. It is gross of any fee waivers or expense reimbursements. It can be found in the fund's most recent prospectus.

30 Day SEC Yield (Also known as Standardized Yield) An annualized yield that is calculated by dividing the net investment income earned by the fund over the most recent 30-day period by the current maximum offering price.

Index Average Yield to Worst The lowest potential yield that can be received on a bond without the issuer actually defaulting. The YTW is calculated by making worst-case scenario assumptions on the issue by calculating the return that would be received if the issuer uses provisions, including prepayments. When aggregating YTW for a portfolio level statistic, the weighted average of the YTW and market value for each security is used.

Option Adjusted Duration An option-adjusted measure of a bond's (or portfolio's) sensitivity to changes in interest rates calculated as the average percentage change in a bond's value (price plus accrued interest) under shifts of the Treasury curve +/- 100 bps. Incorporates the effect of embedded options for corporate bonds and changes in prepayments for mortgage-backed securities.

Option Adjusted Spread A measurement of a fixed-income security rate and the risk-free

rate of return, which is then adjusted to take into account an embedded option.

Quality Breakdown Bloomberg uses the "middle rating" of Moody's, S&P, and Fitch to determine a security's index classification. If only two of the agencies rate a security, then the most conservative (lowest) rating will be used. If only one rating agency rates a security, that one rating will be used. Where there are no security level ratings, an issuer rating may be used to determine index classification. Bloomberg Index breakdowns are grouped into larger categories. For example, AAA+ and AAA are listed as Aaa; AA1, AA2, and AA3 are listed as Aa, etc.

Important Risk Information

Weights are as of the date indicated, are subject to change, and should not be relied upon as current thereafter. Investing involves risk including the risk of loss of principal.

The information provided does not constitute investment advice and it should not be relied on as such. It should not be considered a solicitation to buy or an offer to sell a security. It does not take into account any investor's particular investment objectives, strategies, tax status or investment horizon. You should consult your tax and financial advisor. The whole or any part of this work may not be reproduced, copied or transmitted or any of its contents disclosed to third parties without SSGA's express written consent.

This communication is not intended to be an investment recommendation or investment advice and should not be relied upon as such. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities markets. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities markets and adversely affect global

economies and markets. Local, regional or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments.

Increase in real interest rates can cause the price of **inflation-protected debt securities** to decrease. Interest payments on inflation-protected debt securities can be unpredictable.

Bonds generally present less short-term risk and volatility than stocks, but contain interest rate risk (as interest rates rise, bond prices usually fall); issuer default risk; issuer credit risk; liquidity risk; and inflation risk. These effects are usually pronounced for longer-term securities. Any fixed income security sold or redeemed prior to maturity may be subject to a substantial gain or loss.

The Fund is classified as "diversified" under the Investment Company Act of 1940, as amended (the "1940 Act"); however, the Fund may become "non-diversified," as defined under the 1940 Act, solely as a result of tracking the Index (e.g., changes in weightings of one or more component securities). When the Fund is non-diversified, it may invest a relatively high percentage of its assets in a limited number of issuers.

Passively managed funds invest by sampling the index, holding a range of securities that, in the aggregate, approximates the full Index in terms of key risk factors and other characteristics. This may cause the fund to experience tracking errors relative to performance of the index.

While the shares of ETFs are tradable on secondary markets, they may not readily trade in all market conditions and may trade at significant discounts in periods of **market stress**.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns.
