### Important Risk Information

Funds investing in a **single sector** may be subject to more volatility than funds investing in a diverse group of sectors. Because of their narrow focus, **sector funds** tend to be more volatile than broadly diversified funds and generally result in greater price fluctuations than the overall market.

**Non-diversified funds** that focus on a relatively small number of securities tend to be more volatile than diversified funds and the market as a whole.

**Passively managed funds** hold a range of securities that, in the aggregate, approximates

the full Index in terms of key risk factors and other characteristics. This may cause the fund to experience tracking errors relative to performance of the index.

While the shares of ETFs are tradable on secondary markets, they may not readily trade in all market conditions and may trade at significant discounts in periods of **market stress**.

**ETFs** trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns.

The S&P Select Industry Index series is

The S&P Metals & Mining Select Industry Index is an equal-weighted index that draws constituents from the metals & mining segment of the S&P TMI. Liquidity and market capitalization screens are applied to the index to ensure investability.
