Fund Objective

The State Street Global All Cap Equity ex-US Index Fund (the "Fund") seeks to provide investment results that, before fees and expenses, correspond generally to the total return performance of a broad-based index of world (ex-U.S.) equity markets over the long term.

Process

The Fund seeks to achieve its investment objective by investing substantially all of its investable assets in the Global All Cap Equity ex-U.S. Index Portfolio, which has substantially identical investment policies to the Fund. When the Fund invests in this "master-feeder" structure, the Fund's only investments are shares of the Portfolio and it participates in the investment returns achieved by the Portfolio. Under normal circumstances, the Fund generally invests substantially all, but at least 80%, of its net assets (plus borrowings, if any) in securities comprising the MSCI ACWI ex USA Investable Market Index (the "Index") or in American Depositary Receipts or Global Depositary Receipts providing exposure to securities comprising the Index. The Fund is not managed according to traditional methods of "active" investment management, which involve the buying and selling of securities based upon economic, financial and market analysis and investment judgment. In seeking to track the performance of the Index, the Fund employs a sampling strategy, which means that the Fund is not required to purchase all of the securities represented in the Index. Instead, the Fund may purchase a subset of the securities in the Index in an effort to hold a portfolio of securities with generally the same risk and return characteristics of the Index. The number of holdings in the Fund will be based on a number of factors, including asset size of the Fund. SSGA Funds Management, Inc. (the "Adviser"), the investment adviser to the Fund, generally expects the Fund to hold fewer than the total number of securities in the Index, but reserves the right to hold as many securities as it believes necessary to achieve the Fund's investment objective.

Key Features

- Broad exposure to developed and emerging market countries excluding the U.S.

Past performance is not a reliable indicator of future performance. Investment return and principal value will fluctuate, so you may have a gain or loss when shares are sold. Current performance may be higher or lower than that quoted. All results are historical and assume the reinvestment of dividends and capital gains. Visit www.statestreet.com/im for most recent month-end performance. Performance of an index is not illustrative of any particular investment. It is not possible to invest directly in an index. Index returns are unmanaged and do not reflect the deduction of any fees or expenses. Index returns reflect capital gains and losses, income, and the reinvestment of dividends. An annualized yield that is calculated by dividing the investment income earned by the fund less expenses over the most recent 30-day period by the current maximum offering price that does not take into account expense ratio subsidizations.

The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities markets. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt

securities markets and adversely affect global economies and markets. Local, regional or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments.

Derivative investments may involve risks such as potential illiquidity of the markets and additional risk of loss of principal.

Companies with **large market capitalizations** go in and out of favor based on market and economic conditions. Larger companies tend to be less volatile than companies with smaller market capitalizations. In exchange for this potentially lower risk, the value of the security may not rise as much as companies with smaller market capitalizations.

International markets entail different risks than those typically associated with domestic markets, including foreign currency fluctuation, political and economic instability, accounting changes and foreign taxation. These risks can be increased when investing in emerging markets securities.

Foreign investments involve greater risks than U.S. investments, including political and economic risks and the risk of currency fluctuations, all of which may be magnified in **emerging markets**.

Equity securities may fluctuate in value and can decline significantly in response to the activities of individual companies and general market and economic conditions.
