

Fund Objective

The investment objective of the State Street Equity 500 Index Fund is to replicate as closely as possible, before expenses, the performance of the Standard & Poor's 500 Index.

Process

The Fund seeks to achieve its investment objective by investing substantially all of its investable assets in a corresponding portfolio of the State Street Equity 500 Index Portfolio (the "S&P Master Fund") that has the same investment objective as and investment policies that are substantially similar to those of the Fund. Under normal market conditions, at least 80% of its total assets will be invested (either on its own or as a part of a master/feeder structure) in stocks in the S&P® Index in proportion to their weighting in the S&P 500® Index. The Fund is not managed according to traditional methods of "active" investment management, which involve the buying and selling of securities based upon economic, financial and market analysis and investment judgment. Instead, the Fund utilizes a "passive" investment approach, attempting to replicate the investment performance of its benchmark through automated statistical analytic procedures.

Important Risk Information:

Derivative investments may involve risks such as potential illiquidity of the markets and additional risk of loss of principal.

Investments in **mid-sized companies** may involve greater risks than those in larger, better known companies, but may be less volatile than investments in smaller companies.

Companies with **large market capitalizations** go in and out of favor based on market and economic conditions. Larger companies tend to be less volatile than companies with smaller market capitalizations. In exchange for this potentially lower risk, the value of the security may not rise as much as companies with smaller market capitalizations.

Equity securities may fluctuate in value in response to the activities of individual companies and general market and economic conditions.

The Fund invests by **sampling** the index, holding a range of securities that, in the aggregate, approximates the full Index in terms of key risk factors and other characteristics. This may cause the fund to experience tracking errors relative to performance of the index.
