

State Street Active Multi-Asset Income ETF Portfolio

Diversified Mix of Income Investments The investment universe includes equities, fixed-income, real estate investment trusts (REITs), bank loans, and high yield bonds.

Institutional Expertise Established in 1982, the Investment Solutions Group also manages assets for central banks, pensions, endowments, and other large institutions.

Cost Effective Using primarily ETFs as building blocks, the portfolio seeks to provide attractive, cost-efficient total return.

Investment Objective

The State Street Active Multi-Asset Income ETF Portfolio seeks to generate total return by holding ETFs that invest in a broad range of income-producing assets: domestic and international equity, domestic and international investment-grade and high yield debt, hybrid securities, senior loans, and REITs. This diversification makes the portfolio appropriate to serve as a core income holding. The portfolio employs a tactical asset allocation approach that combines quantitative and qualitative analysis to reflect dynamic market environments.

Investment Strategy

The model portfolio invests in both index-based and active ETFs. Investment Solutions Group (ISG), our 130+ member investment team, makes asset allocation decisions based on a proprietary model, which incorporates macroeconomic, financial, and market data to arrive at a projected return forecast for each asset class. Projections are used to determine the weightings of each asset class to construct a portfolio that seeks to maximize total return. The portfolio typically rebalances monthly, but rebalancing may occur more or less frequently depending on market conditions.

Portfolio Allocations

Ticker	Asset Class	(%)

Source: State Street Global Advisors, as of June 30, 2024. Allocations are as of the date indicated, are subject to change, and should not be relied upon as current thereafter. This information should not be considered a recommendation to invest in a particular sector or to buy or sell any security shown. It is not known whether the sectors or securities shown will be profitable in the future. The holdings are taken from the accounting records of SSGA which may differ from the official books and records of the custodian. Allocations may not sum to 100% due to rounding. **Important Disclosure:** The model portfolios primarily utilize ETFs that make payments to SSGA Funds Management, Inc. or its affiliates (collectively "SSGA") for advisory or other services, which presents a conflict of interest for SSGA. Income earned by SSGA would be lower, and the returns generated by implementing one or more model portfolios might be higher, if the model portfolios were to be constructed using ETFs or other investments that do not pay fees to SSGA.

Important Information

All information is from SSGA unless otherwise noted and has been obtained from sources believed to be reliable, but its accuracy is not guaranteed. There is no representation or warranty as to the current accuracy, reliability or completeness of, nor liability for, decisions based on such information and it should not be relied on as such.

Investing involves risk including the risk of loss of principal.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs' net asset value. Brokerage commissions and ETF expenses will reduce returns.

Asset allocation is a method of diversification which positions assets among major investment categories. While asset allocation may help reduce the investment risk, it does not ensure a profit or guarantee against a loss.

Diversification does not ensure a profit or guarantee against loss.

Actively managed model portfolios do not seek to replicate the performance of a specified index. An actively managed model portfolio may underperform its benchmark. An investment in the model portfolio is not appropriate for all investors and is not intended to be a complete investment program. Investing in the model portfolio involves risks, including the risk that investors may receive little or no return on the investment or that investors may lose part or even all of the investment.

Equity securities may fluctuate in value and can decline significantly in response to the activities of individual companies and general market and economic conditions.

Bonds generally present less short-term risk and volatility than stocks, but contain interest rate risk (as interest rates rise, bond prices usually fall); issuer default risk; issuer credit risk;

liquidity risk; and inflation risk. These effects are usually pronounced for longer-term securities. Any fixed income security sold or redeemed prior to maturity may be subject to a substantial gain or loss.

The information provided does not constitute investment advice and it should not be relied on as such. It should not be considered a solicitation to buy or an offer to sell a security. It does not take into account any investor's particular investment objectives, strategies, tax status or investment horizon. You should consult your tax and financial advisor.
