

SPDR® S&P Kensho New Economies Composite ETF

- **SPDR S&P Kensho New Economies Index looks beyond balance sheets and traditional sector classifications, using artificial intelligence to identify innovative and disruptive companies driving growth within a new economy**
- **KOMP provides broad-based access to companies positioned for expansive growth, while traditional core allocations often overlook those disruptive companies poised to benefit from the dramatically shifting economic landscape**
- **The result is a high beta, high active share, and multi-cap exposure that may be used to bolster long-term growth expectations of core US equity allocations**

The gross expense ratio is the fund's total annual operating expenses ratio. It is gross of any fee waivers or expense reimbursements. It can be found in the fund's most recent prospectus.

KOMP

Highlights
New Economies

Q2 2021

Pursue the Potential of the New Economy with Core Disruption

Advancements in processing power, nanotechnology, artificial intelligence (AI), robotics and automation are driving innovation in the new economy, transforming every facet of our lives and creating exciting growth opportunities. Spending on AI is expected to more than double over the next four years,¹ while enterprise software spending in 2021 and 2022 is expected to grow faster than any other tech segment.² Harnessing these trends is critical to positioning investment portfolios for growth in a changing economy.

KOMP utilizes natural language processing to scan regulatory filings and identify innovative companies related to more than 20 innovation areas. KOMP's approach not only identifies leading companies in each innovation area, but also seeks to capture the entire ecosystems supporting them. During the semi-annual rebalancing, it overweights innovation areas with strong risk-adjusted performance. This proprietary methodology has resulted in exposures across the market-cap spectrum and beyond the traditional core exposure and Technology sector.

1 Led by U.S., Global AI Spending Will More than Double by 2024, According to new IDC Spending Guide, Sep 2020.

2 Gartner Forecasts Worldwide IT Spending to Grow 6.2% in 2021, Gartner Jan 2021.

Projected characteristics are based upon estimates and reflect subjective judgments and assumptions. There can be no assurance that developments will transpire as forecasted and that the estimates are accurate.

New Economies Sub-Sector Exposure

Source: Morningstar, Bloomberg Finance, L.P., Calculations by SPDRs Americas Research, as of 06/30/2021. This information should not be considered a recommendation to invest in a particular sector. It is not known whether the sectors shown will be profitable in the future.

There is only 22% and 7% overlap between KOMP, the S&P 500, and the Invesco QQQ ETF (QQQ), respectively.¹ KOMP's active share versus the S&P 500 and QQQ is 87% and 93%,² as it is differentiated throughout the cap spectrum and industry landscape. Replacing 20% of a core allocation with KOMP may

increase long-term growth potential and position portfolios for a changing economy. Overall, KOMP may help investors adapt to a changing economy and gain exposures to innovative companies underrepresented in the core, allowing for a more innovative approach to core investing.

Fund Comparison Disclosure The funds presented herein have different investment objectives, costs and expenses. Each fund is managed by a different investment firm, and the performance of each fund will necessarily depend on the ability of their respective managers to select portfolio investments. These differences, among others, may result in significant disparity in the funds' portfolio assets and performance. For further information on the funds, please review their respective prospectuses.

KOMP The investment seeks to provide investment results that, before fees and expenses, correspond generally to the total return performance of the S&P Kensho New Economies Composite Index. Under normal market conditions, the fund generally invests substantially all, but at least 80%, of its total assets in the securities comprising the index. The index is designed to capture companies whose products and services are driving innovation and transforming the global economy through the use of existing and emerging technologies, and rapid developments in robotics, automation, artificial intelligence, connectedness and processing power. The fund is non-diversified.

ARKK The investment seeks long-term growth of capital. The fund is an actively-managed exchange-traded fund ("ETF") that will invest under normal circumstances primarily (at least 65% of its assets) in domestic and foreign equity securities of companies that are relevant to the fund's investment theme of disruptive innovation. Its investments in foreign equity securities will be in both developed and emerging markets.

QQQ The investment seeks investment results that generally correspond to the price and yield performance of the index. To maintain the correspondence between the composition and weights of the securities in the trust (the "securities") and the stocks in the NASDAQ-100

Index®, the adviser adjusts the securities from time to time to conform to periodic changes in the identity and/or relative weights of index securities. The composition and weighting of the securities portion of a portfolio deposit are also adjusted to conform to changes in the index.

Risk Discussion

Concentrated investments in a particular sector or industry (technology sector and industrials sector) tend to be more volatile than the overall market and increases risk that events negatively affecting such sectors or industries could reduce returns, potentially causing the value of the Fund's shares to decrease.

When the **Fund focuses its investments** in a particular industry or sector, financial, economic, business, and other developments affecting issuers in that industry, market, or economic sector will have a greater effect on the Fund than if it had not done so.

Investing involves risk including the risk of loss of principal.

The whole or any part of this work may not be reproduced, copied or transmitted or any of its contents disclosed to third parties without SSGA's express written consent.

All information is from SSGA unless otherwise noted and has been obtained from sources believed to be reliable, but its accuracy is not guaranteed. There is no representation or warranty as to the current accuracy, reliability or completeness of, nor liability for, decisions based on such information and it should not be relied on as such.

The information provided does not constitute investment advice and it should not be relied on as such. It should not be considered a solicitation to buy or an offer to sell a security. It does not take into account any investor's particular investment objectives, strategies, tax status or investment horizon. You should consult your tax and financial advisor.

Multi-cap Investments include exposure to all market caps, including small and medium capitalization ("cap") stocks that generally have a higher risk of business failure, lesser liquidity and greater volatility in market price. As a

consequence, small and medium cap stocks have a greater possibility of price decline or loss as compared to large cap stocks. This may cause the Fund not to meet its investment objective.

Technology companies, including cyber security companies, can be significantly affected by obsolescence of existing technology, limited product lines, competition for financial resources, qualified personnel, new market entrants or impairment of patent and intellectual property rights that can adversely affect profit margins.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns.

Equity securities may fluctuate in value in response to the activities of individual companies and general market and economic conditions.

Index-based funds hold a range of securities that, in the aggregate, approximates the full Index in terms of key risk factors and other characteristics. This may cause the fund to experience tracking errors relative to performance of the index.
