

STATE STREET ETF SPOTLIGHT

Balance yield and volatility amid uncertainty- STOT

The lead

- Ongoing geopolitical tensions in the Middle East are intensifying concerns about sustained supply disruptions, keeping oil prices elevated and increasing the likelihood that inflation remains persistent.
- Markets are scaling back expectations for further rate cuts in 2026,¹ suggesting rates may remain range-bound and bond returns skew toward carry rather than duration.
- In this environment, maintaining exposure to shorter-duration, actively managed bond strategies can help balance yield generation with capital preservation, offering a more resilient approach as investors navigate ongoing macroeconomic uncertainty.

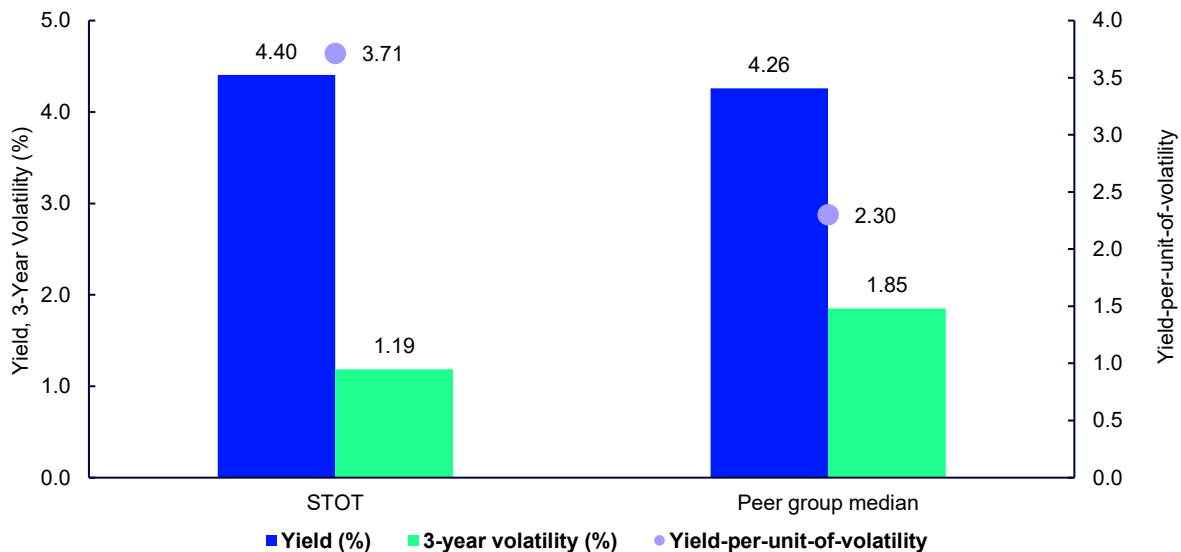

The takeaway

The [State Street® DoubleLine® Short Duration Total Return Tactical ETF \(STOT\)](#) is an actively managed short duration strategy with the goal of maximizing current income. It blends traditional rate sensitive sectors with non-traditional credit exposures to enhance yield, while actively managing interest rate and credit risk.

Driven by DoubleLine’s active management expertise and an expanded opportunity set, STOT has delivered a standout risk adjusted income profile – offering a yield comparable to the US Agg, but with 64% lower volatility and less than one-third the duration.² Relative to category peers, STOT’s risk-adjusted yield ranks in the top 3% and is 61% higher than the peer group median (see the chart below), making it a compelling bond allocation in today’s evolving market environment.³

Chart of the week:

STOT’s risk-adjusted yield vs. peers

Source: Morningstar, as of 4/30/2026. The performance data quoted represents past performance. Past performance does not guarantee future results. Yield = 12-month yield. Volatility = 3-year standard deviation of total NAV returns (annualized). Peer group defined as all US-domiciled ETFs and mutual funds in the Short-Term Bond Morningstar Category (oldest share class).

Standard Performance

Ticker	Name	QTD (%)	YTD (%)	Annualized					Inception Date	Gross Expense Ratio (%)
				1-Year (%)	3-Year (%)	5-Year (%)	10-Year (%)	Since Inception (%)		
STOT (NAV)	State Street® DoubleLine® Short Duration Total Return Tactical ETF	0.45	0.45	4.36	5.38	2.76	-	2.43	4/13/2016	0.45

The performance data quoted represents past performance. Past performance does not guarantee future results. Investment return and principal value will fluctuate, so you may have a gain or loss when shares are sold. Current performance may be higher or lower than that quoted. All results are historical and assume the reinvestment of dividends and capital gains. Visit www.statestreet.com/im for most recent month-end performance. Performance returns for periods of less than one year are not annualized. The performance figures contained herein are provided on a gross and net of fees basis. Gross of fees do not reflect and net of fees reflect the deduction of advisory or other fees which could reduce the return. The performance includes the reinvestment of dividends and other corporate earnings and is calculated in USD. The gross expense ratio is the fund's total annual operating expenses ratio. It is gross of any fee waivers or expense reimbursements. It can be found in the fund's most recent prospectus.

Footnotes

1 – Bloomberg Finance L.P., as of 4/30/2026. Fed funds futures moved from pricing 60 basis points of Federal Reserve rate cuts in 2026 on 2/27/2026, to almost 0 basis points by 4/30/2026.

2 – State Street Investment Management, Morningstar, as of 4/30/2026. **The performance data quoted represents past performance. Past performance does not guarantee future results.** US Agg = Bloomberg US Aggregate Bond Index. Yield = Yield-to-maturity. Duration = Modified adjusted duration. Volatility = Annualized standard deviation of total returns (NAV used for STOT) since STOT's inception (4/13/2016).

3 – Morningstar, as of 4/30/2026. **The performance data quoted represents past performance. Past performance does not guarantee future results.** Based on yield-per-unit-of volatility. Yield = 12-month yield. Volatility = 3-year standard deviation of total NAV returns (annualized). Peer group defined as all US-domiciled ETFs and mutual funds in the Short-Term Bond Morningstar Category (oldest share class). Percentile ranks are scored from 1 to 100, where lower is better.

Diversification does not ensure a profit or guarantee against loss.

Actively managed funds do not seek to replicate the performance of a specified index. An actively managed fund may underperform its benchmark. An investment in the fund is not appropriate for all investors and is not intended to be a complete investment program. Investing in the fund involves risks, including the risk that investors may receive little or no return on the investment or that investors may lose part or even all of the investment

Investments in **asset backed** and **mortgage backed securities** are subject to prepayment risk which can limit the potential for gain during a declining interest rate environment and increases the potential for loss in a rising interest rate environment.

Floating rate securities are often lower quality debt securities and may involve greater risk of price changes and greater risk of default on interest and principal payments. The market for floating rate bank loans is largely unregulated and these assets usually do not trade on an organized exchange. As a result, floating rate bank loans can be relatively illiquid and hard to value. Bank Loans are subject to credit, interest rate, income and prepayment risks. The fund may invest in secured and unsecured participations in bank loans. Participation loans are loans made by multiple lenders to a single borrower, e.g., several banks participate in one large loan with one of the banks taking the role of the lead bank. The lead bank recruits other banks to participate and share in the risks and profits. There is also the risk that the collateral may be difficult to liquidate or that a majority of the collateral may be illiquid. In participation the fund assumes the credit risk of the lender selling the participation in addition to the credit risk of the borrower.

Foreign (non-U.S.) Securities may be subject to greater political, economic, environmental, credit and information risks. Foreign securities may be subject to higher volatility than U.S. securities, due to varying degrees of regulation and limited liquidity. These risks are magnified in **emerging markets**.

Bonds generally present less short-term risk and volatility than stocks, but contain interest rate risk (as interest rates rise, bond prices usually

fall); issuer default risk; issuer credit risk; liquidity risk; and inflation risk. These effects are usually pronounced for longer-term securities. Any fixed income security sold or redeemed prior to maturity may be subject to a substantial gain or loss.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns
