Disorderly Transition (2 °C)	-1.03%	95.17%
Hothouse (3 °C)	-1.50%	95.17%

Glossary

Sustainability data is as of the date identified in the report sections above, usually on a month lag.

Climate Metrics

Data Treatments: State Street applies the data treatments where applicable to Climate Metrics. To review the data treatments and the metrics they are applied to please click here.

Portfolio Coverage: is dependent upon the universe covered by SSGA's external providers. For certain markets and types of companies, there may be significant limitations in the availability of data, or in some cases, no data may be available at all. In such instances, the benchmark index provider, investment manager, an affiliate of the investment manager or another party may use data from a related entity as a proxy or generate estimated data to fill these gaps.

Brown Revenues: Percentage of revenue from "brown" sectors and activities, including fossil fuel extractions, mining, operations, and power generation, employing MSCI revenue indicators. Brown revenue (%) is defined as the proportion of revenues a company derives from activities related to the extraction of fossil fuels, or power generation using fossil fuel-based energy sources. It reflects firms tied to conventional energy value chains.

Brown Revenues – MSCI: Weighted Average of each Underlying Security with Brown Revenue for the portfolio level.

Potential Emissions – MSCI: Sum of Weighted Average Total Potential Emission of Fossil Fuel Reserves Normalized by EVIC $MN (ktCO2-eq per $MN invested) on the Portfolio Level.

Green Bonds: The Climate Bonds Initiative (CBI) defines green bonds as debt instruments that finance projects with environmental benefits, and the CBI Green Bond Database uses a methodology to evaluate and categorize projects as green. The CBI's methodology includes the following criteria:

> **Self-labeling:** The issuer must consciously label the instrument as a green bond.
>
> **Public disclosure:** The issuer must provide sufficient information to determine if the financed assets are green. This includes information such as the amount outstanding and closing confirmation.
>
> **Eligible sectors:** The financed assets must be in eligible sectors, such as energy efficient products and processes, or non-energy GHG reductions.
>
> **Eligible use of proceeds:** The proceeds must be used for eligible purposes.

Green Bonds – CBI: Market Value of Securities with Green Bonds as a Percentage of the Total Market Value of all Securities in the Portfolio.

Green/Fossil Fuel Based Revenue Ratio - MSCI: The Sum of Green to Fossil Fuel Based Revenue Ratio on the Portfolio level and the Sum of Green to Fossil Fuel Based Revenue Ratio on the Portfolio and Benchmark level.

Companies with SBTi /Approved Targets – MSCI: The percentage of the fund's market value exposed to issuers that have carbon emissions reduction targets approved by the Science Based Targets initiative (SBTi) on the Portfolio level.

Low Carbon Transition Score – MSCI: Score calculates a company's climate transition risk by aggregating Scope 1, 2 and 3 emissions, emissions avoided, and the quality of the company's climate management into a score between 0 (highest risk) and 10 (lowest risk). Companies with higher Low Carbon Transition score are more aligned with the Low Carbon Transition compared to the companies with lower scores. Score calculated at the Portfolio level.

Carbon Risk Rating – ISS: Assesses a company's ability to deal with climate change and the transition to a low-carbon economy rated on a scale of 0 to 100, with 0 being very poor and 100 being excellent. The Carbon Risk Rating provides an aggregated score indicating a company's overall climate-related risk, using the company-specific risk exposure as baseline (Carbon Risk Classification) from which a company can take steps toward better alignment with a low carbon economy (Carbon Performance score).

Weighted Average of each Underlying Security with a Carbon Risk Rating Value for the Portfolio level.

Carbon Footprint:

> **Scope 1+2+3 - (t CO2e/$M EVIC) - MSCI:** Weighted average Scope 1, Scope 2 and Scope 3 carbon emissions intensity normalized by enterprise value including cash.

Total Carbon Emissions – MSCI: Total Carbon Emissions measures the absolute tons of CO2e EVIC for which an investor is responsible. It is apportioned to the investor based on an equity ownership perspective, and can be explained with a simple example: If an investor's position in a company is equal to 1% of the company's total market capitalization, then the investor owns 1% of the company, and is consequently responsible for 1% of the company's carbon emissions (tons CO2e). Calculating the "owned" emissions from each position in the portfolio and summing those emissions yields the total carbon emissions for the portfolio.

> **Scope 1** emissions are "direct emissions" from sources that are owned or controlled by the company.
>
> **Scope 2** emissions are the indirect emissions released into the atmosphere from the use of purchased energy such as electricity, heat or steam. These are called "indirect emissions" because the actual emissions are generated at another facility such as a power station.
>
> **Scope 3** emissions include all other indirect emissions that occur across the value chain and are outside of the organization's direct control.

Weighted Average Carbon Intensity - MSCI: Scope 1+2+3 - Calculating a portfolio's Weighted Average Carbon Intensity is achieved by calculating the carbon intensity (Scope 1 + 2 + 3 Emissions / $M Sales) for each portfolio company and calculating the weighted average by portfolio weight.

Please note that the scope 1+2 and scope 1+2+3 values for Total Carbon Emissions, Carbon Footprint, and Weighted Average Carbon Intensity may not equal the sum of the individual values. This may occur for a few reasons. Each metric is a distinct data element provided by the vendor. Data treatments for replacing null data with sub-industry median data could cause differences in aggregated results. Data is reported based on the most recent common fiscal year end, which may vary for aggregated fields and is more likely with scope 3.

Implied Temperature Rise (℃) – MSCI: The climate scenario alignment uses MSCI's Implied Temperature Rise (ITR) model, Which is a forward-looking temperature alignment metric for companies and portfolios. Specifically, the MSCI ITR methodology evaluates whether a company or portfolio are aligned with the Paris Agreement temperature goals – in particular, the maximal goal of limiting global mean surface temperature to an increase of no more than 1.5°C in the year 2100 compared with preindustrial levels. For example, an ITR of 2.5°C assigned to a given portfolio would indicate that the portfolio is exceeding its fair share of the global carbon budget, and that if everyone exceeded their fair shares by a similar proportion, by 2100 we would end up in a world with >2.5°C of warming compared to pre-industrial levels. Please note there is significant uncertainty related to this temperature estimate, and outputs differ amongst different data vendors as methodologies continue to evolve and mature.

Portfolio: Implied Temperature Rise aggregated at the Portfolio Level.

Climate Value at Risk- MSCI: (Climate VaR) is a measure to estimate the potential financial losses that a company or portfolio of assets could incur as a result of climate change. For additional details Climate Value at Risk metrics included on this report click here.

Marketing Communication

For institutional / professional investors use only.

The information presented above is intended to provide transparency to investors around sustainability characteristics of the fund. Presenting this information should not be construed as a representation of the fund's current or future investment objective, nor should it be viewed as an indicator of the fund manager's current or future investment decision-making.

Investing involves risk including the risk of loss of principal.

All information is from SSGA unless otherwise noted and has been obtained from sources believed to be reliable, but its accuracy is not guaranteed. There is no representation or warranty as to the current accuracy, reliability or completeness of, nor liability for, decisions based on such information and it should not be relied on as such.

The information provided does not constitute investment advice as such term is defined under the Markets in Financial Instruments Directive (2014/65/EU) or applicable Swiss regulation and it should not be relied on as such. It should not be considered a solicitation to buy or an offer to sell any investment. It does not take into account any investor's or potential investor's particular investment objectives, strategies, tax status, risk appetite or investment horizon. If you require investment advice you should consult your tax and financial or other professional advisor.

The information contained in this communication is not a research recommendation or 'investment research' and is classified as a 'Marketing Communication' in accordance with the applicable regional regulation. This means that this marketing communication (a) has not been prepared in accordance with legal requirements designed to promote the independence of investment research (b) is not subject to any prohibition on dealing ahead of the dissemination of investment research.

This communication is directed at professional clients (this includes eligible counterparties as defined by the appropriate EU regulator) who are deemed both knowledgeable and experienced in matters relating to investments. The products and services to which this communication relates are only available to such persons and persons of any other description (including retail clients) should not rely on this communication.

Equity securities may fluctuate in value and can decline significantly in response to the activities of individual companies and general market and economic conditions.

Bonds generally present less short-term risk and volatility than stocks, but contain interest rate risk (as interest rates raise, bond prices usually fall); issuer default risk; issuer credit risk; liquidity risk; and inflation risk. These effects are usually pronounced for longer-term securities. Any fixed income security sold or redeemed prior to maturity may be subject to a substantial gain or loss.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns.

The returns on a portfolio of securities which exclude companies that do not meet the portfolio's sustainable strategy criteria may trail the returns on a portfolio of securities which include such companies. A portfolio's sustainable strategy criteria may result in the portfolio investing in industry sectors or securities which underperform the market as a whole.

R-Factor scoring is designed by State Street to reflect certain sustainability factors and does not represent investment performance. Results generated out of the scoring model are based on sustainability dimensions of a scored entity.

For AIFMD Funds where applicable:

For Professional Client/Qualified Investor Use Only in the Switzerland, Netherlands, Sweden and United Kingdom. Not for public distribution.

In the UK, this document has been issued by State Street Global Advisors Limited ("SSGAL"). Authorized and regulated by the Financial Conduct Authority, Registered No.2509928. VAT No. 5776591 81.
