Glossary

Sustainability data is as of the date identified in the report sections above, usually on a month lag. All metrics are reported in USD unless otherwise stated.

Data Treatments: State Street applies the data treatments where applicable to Sustainability Metrics. To review the data treatments and the metrics they are applied to please see the data treatments table below.

ESG Score/ESG Rating - MSCI: Provide an opinion of sovereign and sub-sovereign entities' exposure to and management of ESG risks. MSCI ESG Research defines ESG risks to sovereign or sub sovereign entities as environmental, social, or governance-related issues that could impact the long-term sustainability of their economies. MSCI ESG Government Ratings are determined for countries, local authorities, and supranational administrative bodies and are relative to a global peer set. Each rating takes into consideration measures of environmental risk and management, knowledge and social capital, and the strength of financial, judicial, and political systems. ESG Government Scores are calculated for all countries and then converted into a letter rating. The AAA rating represents the highest ESG Rating (i.e., lower ESG risk exposure and stronger risk management) whereas the CCC rating represents the lowest ESG Rating (i.e., higher ESG risk exposure and weaker risk management).

ESG Ratings Distribution - MSCI

ESG Leaders: Rated AAA or AA: Issuers(sov​​erign) that have strong management of financially relevant environmental, social and AA governance issues.

ESG Average: Rated A, BBB or BB: Issuers(sov​​erign) that have average management of ESG issues.

ESG Laggards: Rated B or CCC: Issuers(sov​​erign) that do not demonstrate adequate management of the financially relevant ESG risks that they face.

ESG Not Covered: Issuers(sov​​erign) which have not been evaluated for ESG sustainability risks.

Green Bonds - CBI: Market Value of Securities with Green Bonds as a Percentage of the Total Market Value of all Securities in the Portfolio. Bonds are identified as green if they meet the criteria for Climate Bonds Initiative's (CBI) green labelled database. For more information on the Green Bond Database methodology, please visit <https://www.climate-bonds.net/data-insights/market-data/green-bond-dataset-methodology>

Adverse Sustainability Indicators(Weighted Average) - MSCI

Average Income Inequality Score(Weighted): measures the extent to which the distribution of income (or, in some cases, consumption expenditure) among individuals or households within an economy deviates from a perfectly equal distribution.

Average Corruption Score(Weighted): Perceptions of public-sector corruption, including bribery, diversion of public funds, use of public office for private gain, nepotism in the civil service, state capture and mechanisms available to prevent corruption.

Average Rule of Law Score(Weighted): measures the strength and predictability of a country's legal system and institutions. Assesses factors like: Protection of property rights, Contract enforcement, Absence of corruption, Public safety and security.

Average Freedom of Expression Score(Weighted): assesses the extent to which countries and their citizens enjoy freedom of expression. It evaluates the protection and promotion of fundamental freedoms, including freedom of speech, press, assembly, and association.

Average Political Stability Score(Weighted): assesses the potential adverse impacts of investment decisions on sustainability factors. Analyzes various factors related to political stability, including government stability, internal conflict, and external conflict.

Sovereign - Weighted Average Carbon Intensity - MSCI: Weighted

Average Carbon Intensity (WACI) evaluates a portfolio's relative exposure to carbon intensive economies. Portfolio-weighted GHG emissions per sovereign GDP. (PPP GDP (PPP-adjusted GDP of the country expressed in millions of US dollars).

Scope 1 (exclude LULUCF) - MSCI: The most recently reported or estimated Scope 1 greenhouse gas emissions for the country/territory (if available), in tons of CO2 equivalent per year (tCO2e/yr). Scope 1 emissions are domestic GHG emissions from sources located within the country/territory. Values exclude land use, land-use change and forestry (LULUCF).

Scope 1 (include LULUCF) - MSCI: The most recently reported or estimated Scope 1 greenhouse gas emissions for the country/territory (if available), in tons of CO2 equivalent per year (tCO2e/yr). Scope 1 emissions are domestic GHG emissions from sources located within the country territory. Values include land use, land-use change and forestry (LULUCF).

Consumption (Scope 1 exclude LULUCF + scope 2+3 - exported emissions) - MSCI: The estimated consumption emissions for the country/territory (if available), in tons of CO2 equivalent per year (tCO2e/yr). MSCI ESG Research calculates consumption emissions based on Scope 1 emissions excl. LULUCF plus Scope 2 and Scope 3 emissions minus exported emissions.

Total Carbon Emissions - MSCI: Total carbon emissions includes all greenhouse gas emissions produced within a country's borders from all sources, including energy production, industry, agriculture, and transportation apportioned by **PPP GDP** (PPP-adjusted GDP of the country expressed in millions of US dollar).

Scope 1 (excluding LULUCF) MSCI: The most recently reported or estimated Scope 1 greenhouse gas emissions for the country/territory (if available), in tons of CO2 equivalent per year (tCO2e/yr). Scope 1 emissions are domestic GHG emissions from sources located within the country/territory. Values exclude land use, land-use change and forestry (LULUCF).

Scope 1 (including LULUCF) MSCI: The most recently reported or estimated Scope 1 greenhouse gas emissions for the country/territory (if available), in tons of CO2 equivalent per year (tCO2e/yr). Scope 1 emissions are domestic GHG emissions from sources located within the country territory. Values include land use, land-use change and forestry (LULUCF).

Consumption (Scope 1 exclude LULUCF + scope 2+3 - exported emissions) - MSCI: The estimated consumption emissions for the country (if available), in tons of CO2 equivalent per year (tCO2e/yr). MSCI ESG Research calculates consumption emissions based on Scope 1 emissions excl. LULUCF plus Scope 2 and Scope 3 emissions minus exported emissions.

Government Freedom Status MSCI:

Free: Countries with strong political rights and civil liberties.

Partially Free: Countries where some political rights and civil liberties are present, but there are challenges and limitations.

Not Free: Countries where political rights and civil liberties are largely absent.

No Data: No data available to evaluate a country's government based on political rights and civil liberties.

The information presented above is intended to provide transparency to investors around sustainability characteristics of the fund. Presenting this information should not be construed as a representation of the fund's current or future investment objective, nor should it be viewed as an indicator of the fund manager's current or future investment decision-making.

Investing involves risk including the risk of loss of principal.

The whole or any part of this work may not be reproduced, copied or transmitted or any of its contents disclosed to third parties without SSGA's express written consent.

All information is from SSGA unless otherwise noted and has been obtained from sources believed to be reliable, but its accuracy is not guaranteed. There is no representation or warranty as to the current accuracy, reliability or completeness of, nor liability for, decisions based on such information and it should not be relied on as such.

The information provided does not constitute investment advice as such term is defined under the Markets in Financial Instruments Directive (2014/65/EU) or applicable Swiss regulation and it should not be relied on as such. It should not be considered a solicitation to buy or an offer to sell any investment. It does not take into account any investor's or potential investor's particular investment objectives, strategies, tax status, risk appetite or investment horizon. If you require investment advice you should consult your tax and financial or other professional advisor.

The information contained in this communication is not a research recommendation or 'investment research' and is classified as a 'Marketing Communication' in accordance with the applicable regional regulation. This means that this marketing communication (a) has not been prepared in accordance with legal requirements designed to promote the independence of investment research (b) is not subject to any prohibition on dealing ahead of the dissemination of investment research.

This communication is directed at professional clients (this includes eligible counterparties as defined by the appropriate EU regulator) who are deemed both knowledgeable and experienced in matters relating to investments. The products and services to which this communication relates are only available to such persons and persons of any other description (including retail clients) should not rely on this communication.

Bonds generally present less short-term risk and volatility than stocks, but contain interest rate risk (as interest rates rise, bond prices usually fall); issuer default risk; issuer credit risk; liquidity risk; and inflation risk. These effects are usually pronounced for longer-term securities. Any fixed income security sold or redeemed prior to maturity may be subject to a substantial gain or loss.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns.

The returns on a portfolio of securities which exclude companies that do not meet the portfolio's sustainable strategy criteria may trail the returns on a portfolio of securities which include such companies. A portfolio's sustainable strategy criteria may result in the portfolio investing in industry sectors or securities which underperform the market as a whole.

R-Factor scoring is designed by State Street to reflect certain sustain-

ability factors and does not represent investment performance. Results generated out of the scoring model are based on sustainability dimensions of a scored entity.
